

National Breast Imaging Academy (NBIA) Fellowship Programme Information for Prospective Host Centres

The National Breast Imaging Academy (NBIA) has been established to address the breast imaging workforce shortages in England, and to raise the profile of breast imaging.

As part of this an exciting new breast radiology fellowship programme, part-funded by Health Education England (HEE), has been set up. This is a national collaborative venture to offer a prestigious fellowship programme designed to promote excellence in breast imaging, challenge the most talented trainees and provide the leaders, educators and researchers of the future. The first intake of fellows started in September 2019 and the programme is set to run for three consecutive years

What are the aims of the fellowship programme?

- Establish a gold-standard fellowship programme to raise the profile and prestige of breast imaging.
- Provide enhanced training in breast imaging above and beyond RCR higher breast training
- Equip talented trainees to become the leaders, educators and researchers of the future
- Use the pooled expertise and experience of the breast imaging community to deliver world-class training

On call is not a requirement of the fellowship however if there is a service need this will be negotiated locally and paid for by the host site.

How are these posts funded?

The NBIA has secured funding from HEE towards 50% of the basic salary costs of each fellow. Eligible breast units wishing to host a fellow must secure the remaining funding.

Who can apply?

- UK radiologists who have achieved their CCT
- UK radiology trainees who will have achieved their CCT prior to the start of the fellowship
- Overseas radiologists with equivalent qualifications (must also meet International Sponsorship Scheme criteria if applicable)

What is the duration of the fellowship?

Fellowships are for 12 months if working full time, or for the less than full time equivalent duration.

What is the recruitment process?

Applicants will undergo a competitive centralised recruitment process. Candidates will be given a list of potential host sites and asked to rank the host sites in order of preference. Successful candidates will be matched to host sites in order of interview score.

When is the next intake of fellows?

Fellowships are due to be advertised in March 2020
Shortlisting for posts will happen in April 2020
Centralised interviews will be held in May 2020
Fellowships will commence in 2020 from September onwards

What is the structure of the fellowship?

NBIA fellowships are specifically designed to be single subspecialty training opportunities in breast. Fellows will train in various aspects of breast imaging whilst supporting radiology service delivery. Training will be supplemented by fully-funded bespoke study blocks where all fellows will come together to receive expert teaching and benefit from networking opportunities.

Fellowships are for 12 months if working full time, or for the less than full time equivalent duration.

Fellows who are interested in developing their skills in research, leadership and teaching will be encouraged supported to do so and the NBIA will facilitate access to opportunities to progress in these areas. Bespoke online resources will also be provided.

Can my breast unit become a host centre?

Yes, subject to:

1. Meeting the host centre eligibility criteria
2. Securing the remaining funding for the post (the NBIA has developed a template business case to assist with this process)
3. Having sufficient training capacity to host a fellow in addition to existing trainees

Please note, if your unit is approved as a potential host centre, there is no guarantee that a fellow will be placed at your unit, as this is dependent upon successful candidates choosing to be placed at your breast unit.

How do we apply to become a host centre?

- Email: breastacademy@mft.nhs.uk
- Complete an eligibility checklist and hospital application form, which will be reviewed by the NBIA.
- Secure funding from your Trust to make up the remaining salary costs.

How can I find out more?
