The National Breast Imaging Academy is being run in collaboration with Health Education England and is hosted by Manchester University NHS Foundation Trust

# NBIA Online

□

The National Breast Imaging Academy (NBIA) is a collaborative, national, multidisciplinary initiative which encompasses a range of solutions to address these issues. These include the establishment of a national centre of excellence for training, the development of high-quality training programmes for radiographers, radiologists and breast clinicians and an innovative, online technology-enhanced learning platform; the NBIA Online.

The three main components of the NBIA Online are:

- a National Breast Imaging Academy e-Learning for Healthcare (elfh) programme
- a national breast imaging case archive
- a national online learning community with further resources to complement the elfh programme and provide mentoring and support

## About the National Breast Imaging Academy programme

Breast imaging services across the UK are facing significant challenges in delivery and sustainability as a result of the combination of increasing demand for breast imaging and shortages across all aspects of the workforce.

The National Breast Imaging Academy (NBIA) is a collaborative, national, multidisciplinary initiative which encompasses a range of solutions to address these issues. These include the establishment of a national centre of excellence for training, the development of high-quality training programmes for radiographers, radiologists and breast clinicians and an innovative, online technology-enhanced learning platform; the NBIA Online. The Academy team is also working to raise the profile of a career in breast imaging and to promote excellence across all aspects of the specialty.

The National Breast Imaging Academy is being run in collaboration with Health Education England and is hosted by Manchester University NHS Foundation Trust

# NBIA Online

□

The NBIA e-Learning for Healthcare (elfh) programme can be accessed from the elfh homepage:

<https://portal.e-lfh.org.uk/>

The programme provides comprehensive coverage of all aspects of breast imaging and relevant aspects of surgery, oncology, pathology, nursing, and risk and prevention for both trainees and qualified staff.

Over 120 learning sessions are available. A trainee breast clinician learning path can be selected to highlight sessions relevant to trainees enrolled on the credential. These include risk and prevention sessions.
